PROJECTS

T.V.O.D. | <https://tvod.herokuapp.com>

This full-stack app is a web platform for users to track what television programs they are watching during this era of "Peak TV."

- Implemented React to create maintainable components in JavaScript.
- Used Redux to maintain state across components and Router to create unique URLs for each page.
- Used Express to create back-end server and develop REST-ful APIs. Utilized Knex and PostgreSQL to create entity-relational databases.
- Applied Axios for front-end client to fetch data from the back-end server. Deployed front-end and back-end separately onto Heroku.
- Presented app at Seattle ReactJS, BellevueJS and SeattleJS meetups.

Watch presentation: https://www.youtube.com/watch?v=JV3cFP_CQEO

PUMP UP THE VOLUNTEERS | <https://pumpupthevolunteers.surge.sh>

This full-stack app allows for non-profits to post events that require volunteers, and allows volunteers to find events that match their interests.

- Wrote HTML and CSS to design pages. Implemented Bootstrap and Materialize to create responsive design.
- Used vanilla JavaScript and DOM Manipulation to parse information across pages and server.
- Created two separate sign-in pages for different user types. Used JSON web tokens and password hashing to maintain user security.
- Developed back-end server using Express. Utilized third-party API OrgHunter to gather non-profit information for project.
- Deployed front-end onto Surge and back-end onto Heroku.

TRACKMEET | <https://trackmeet.surge.sh>

This front-end app that allows you to keep track of information regarding the people you meet.

- Utilized Browerify to compile HTML, CSS and JavaScript on Node.
- Implemented Bootstrap to create responsive page and components.
- Made use of local storage to save data.
